Technical Assignment (Frontend):

Task:

Design and develop a React Application for the WebApp design as in the samples folder

Instructions:

- The UI design for the WebApp is given in the samples folder, kindly refer to both the Web-View and Mobile-View images in the folder to understand the design for the same
- The design of the application should be responsive and accurate in terms of looks as shown in samples
- Focus on user experience and accessibility, while keeping the code modular so as to easily accommodate new requirements with minimal changes
- Maintain a good file hierarchy and follow best practices to improve naming conventions within your application's source code

Additional Notes:

- For images that are to be used in the website, refer to the assets folder provided along with the assignment
- Make sure to add comments within the code wherever necessary for easy readability and understanding of your code
